

# Single Page Applications & AJAX

---

*Wow. Such buzzwords. Much JavaScript*

# HTTP REQUESTS IN THE BROWSER

- **Browser navigation**
  - URL bar
  - Links
  - `window.location.href = "http://www.google.com";`
- **Submitting forms (GET/POST)**
- **All the above makes the browser navigate and retrieve new documents.**

# Server

index.html

GET /

User clicks on link . . .

# Server

**settings.html**

**GET /settings**

# NOT single page applications

- Views stored on the server, served up as HTML pages.
- When user goes to a new page, the browser navigates in totality, navigating, refreshing and retrieving a brand new HTML.
- Each page, since it is a new page, retrieves stylesheets, script files, etc.

A wooden bowl containing stacked stones and a green leaf, symbolizing relaxation and spa.

# *What is SPA?*

*“SPA is a web site that fits on a single web page with the goal of providing a more fluid user experience”*

WIKIPEDIA

# Single Page Applications

- **No reload or “refresh” within the user interface**
  - JavaScript manipulates the DOM as the user interacts
- **User experience similar to a native application**

*What is  
AJAX?*

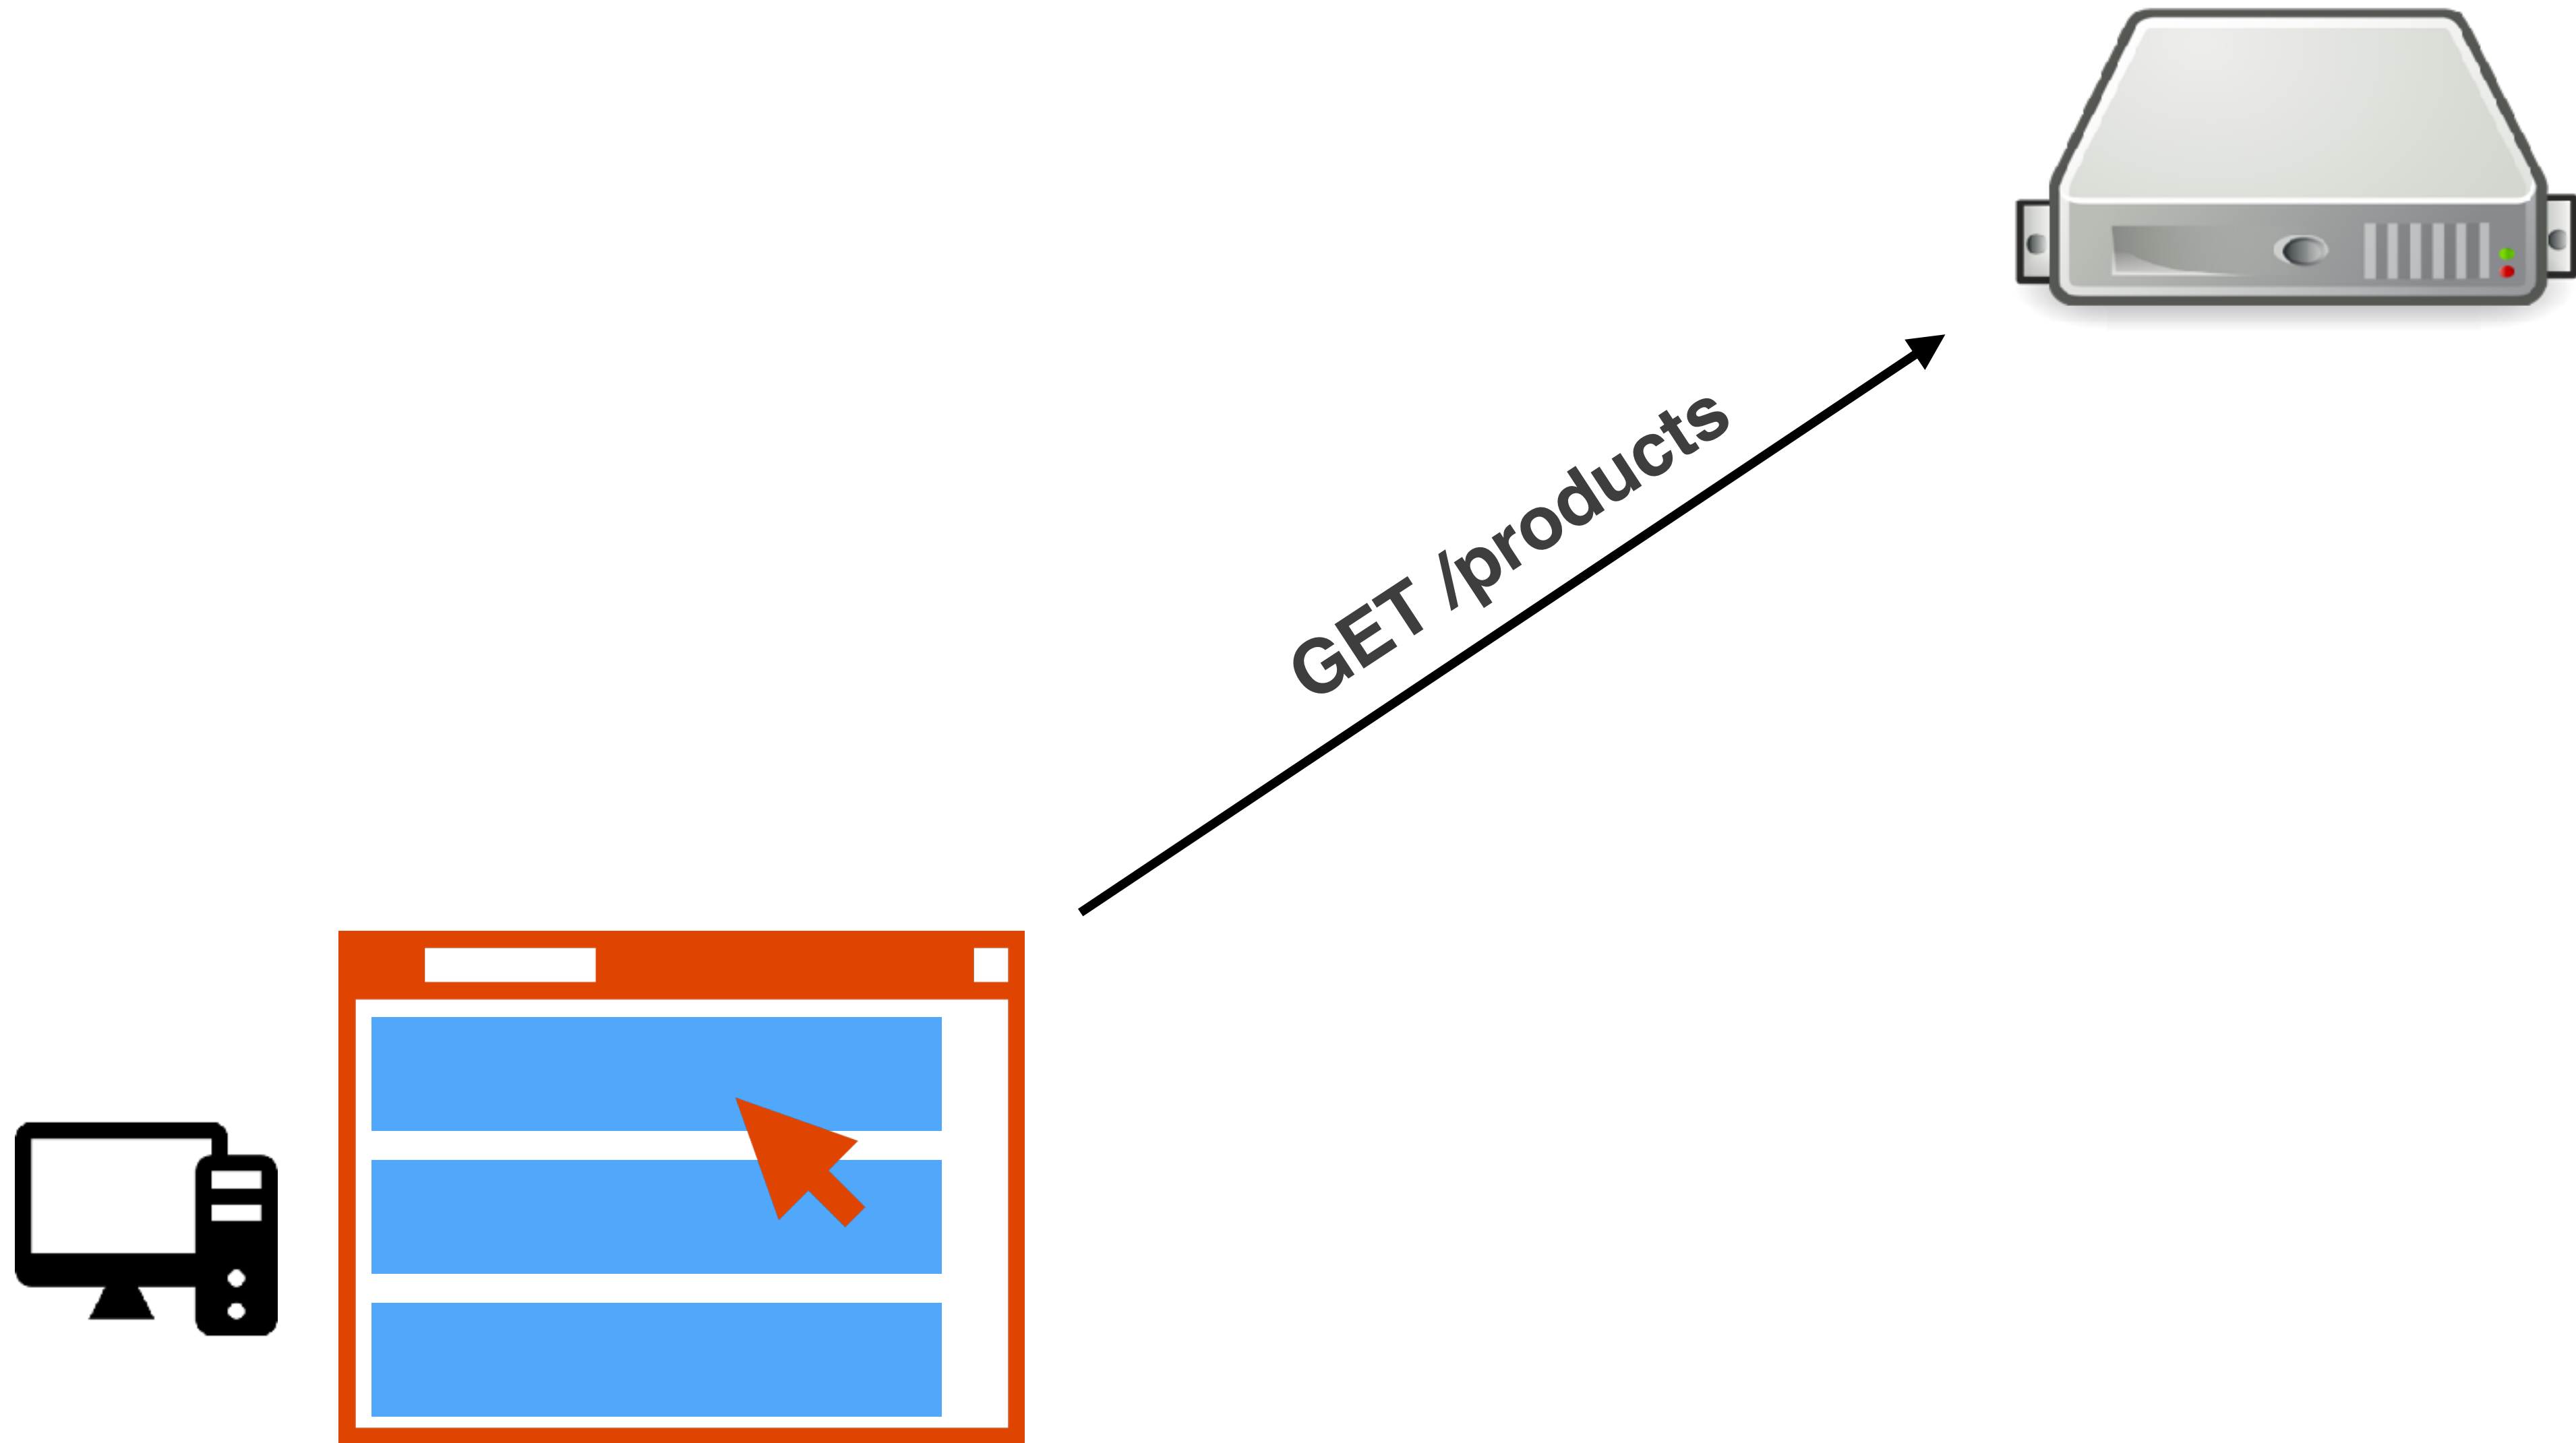

# AJAX

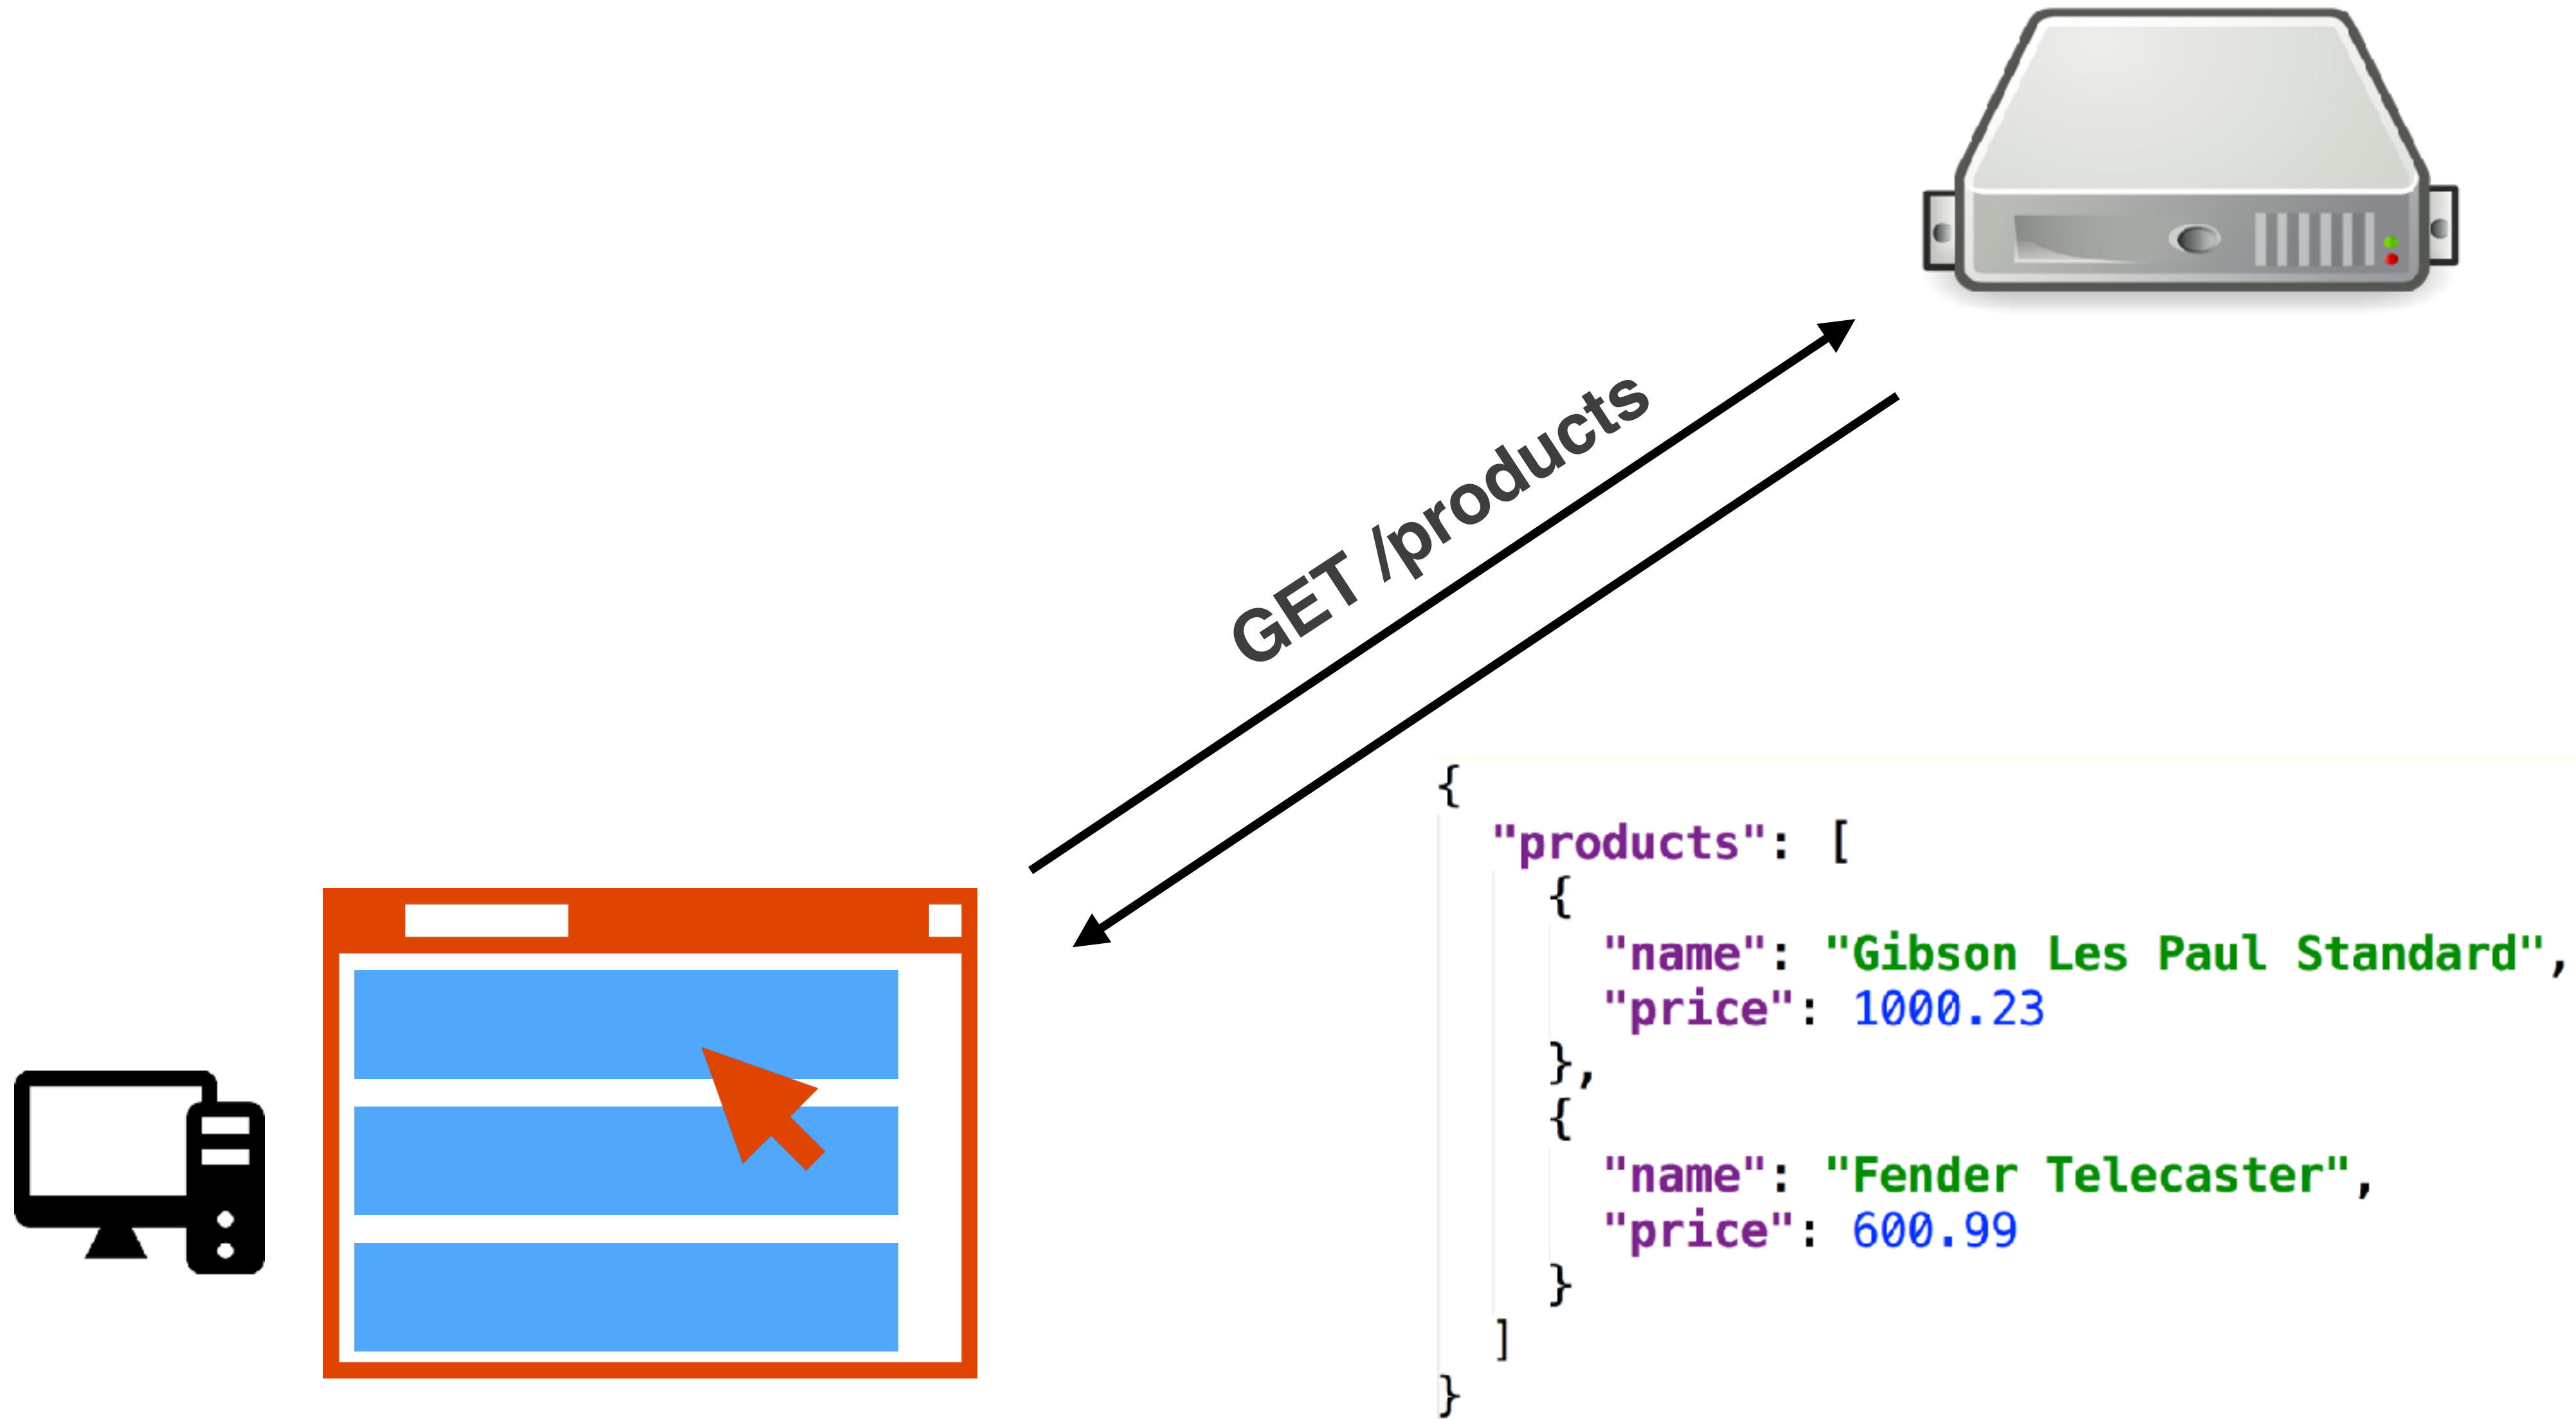

- **Making background HTTP requests using JavaScript**
- **Handling the response of those HTTP requests with JavaScript**
- **No page refresh necessary**

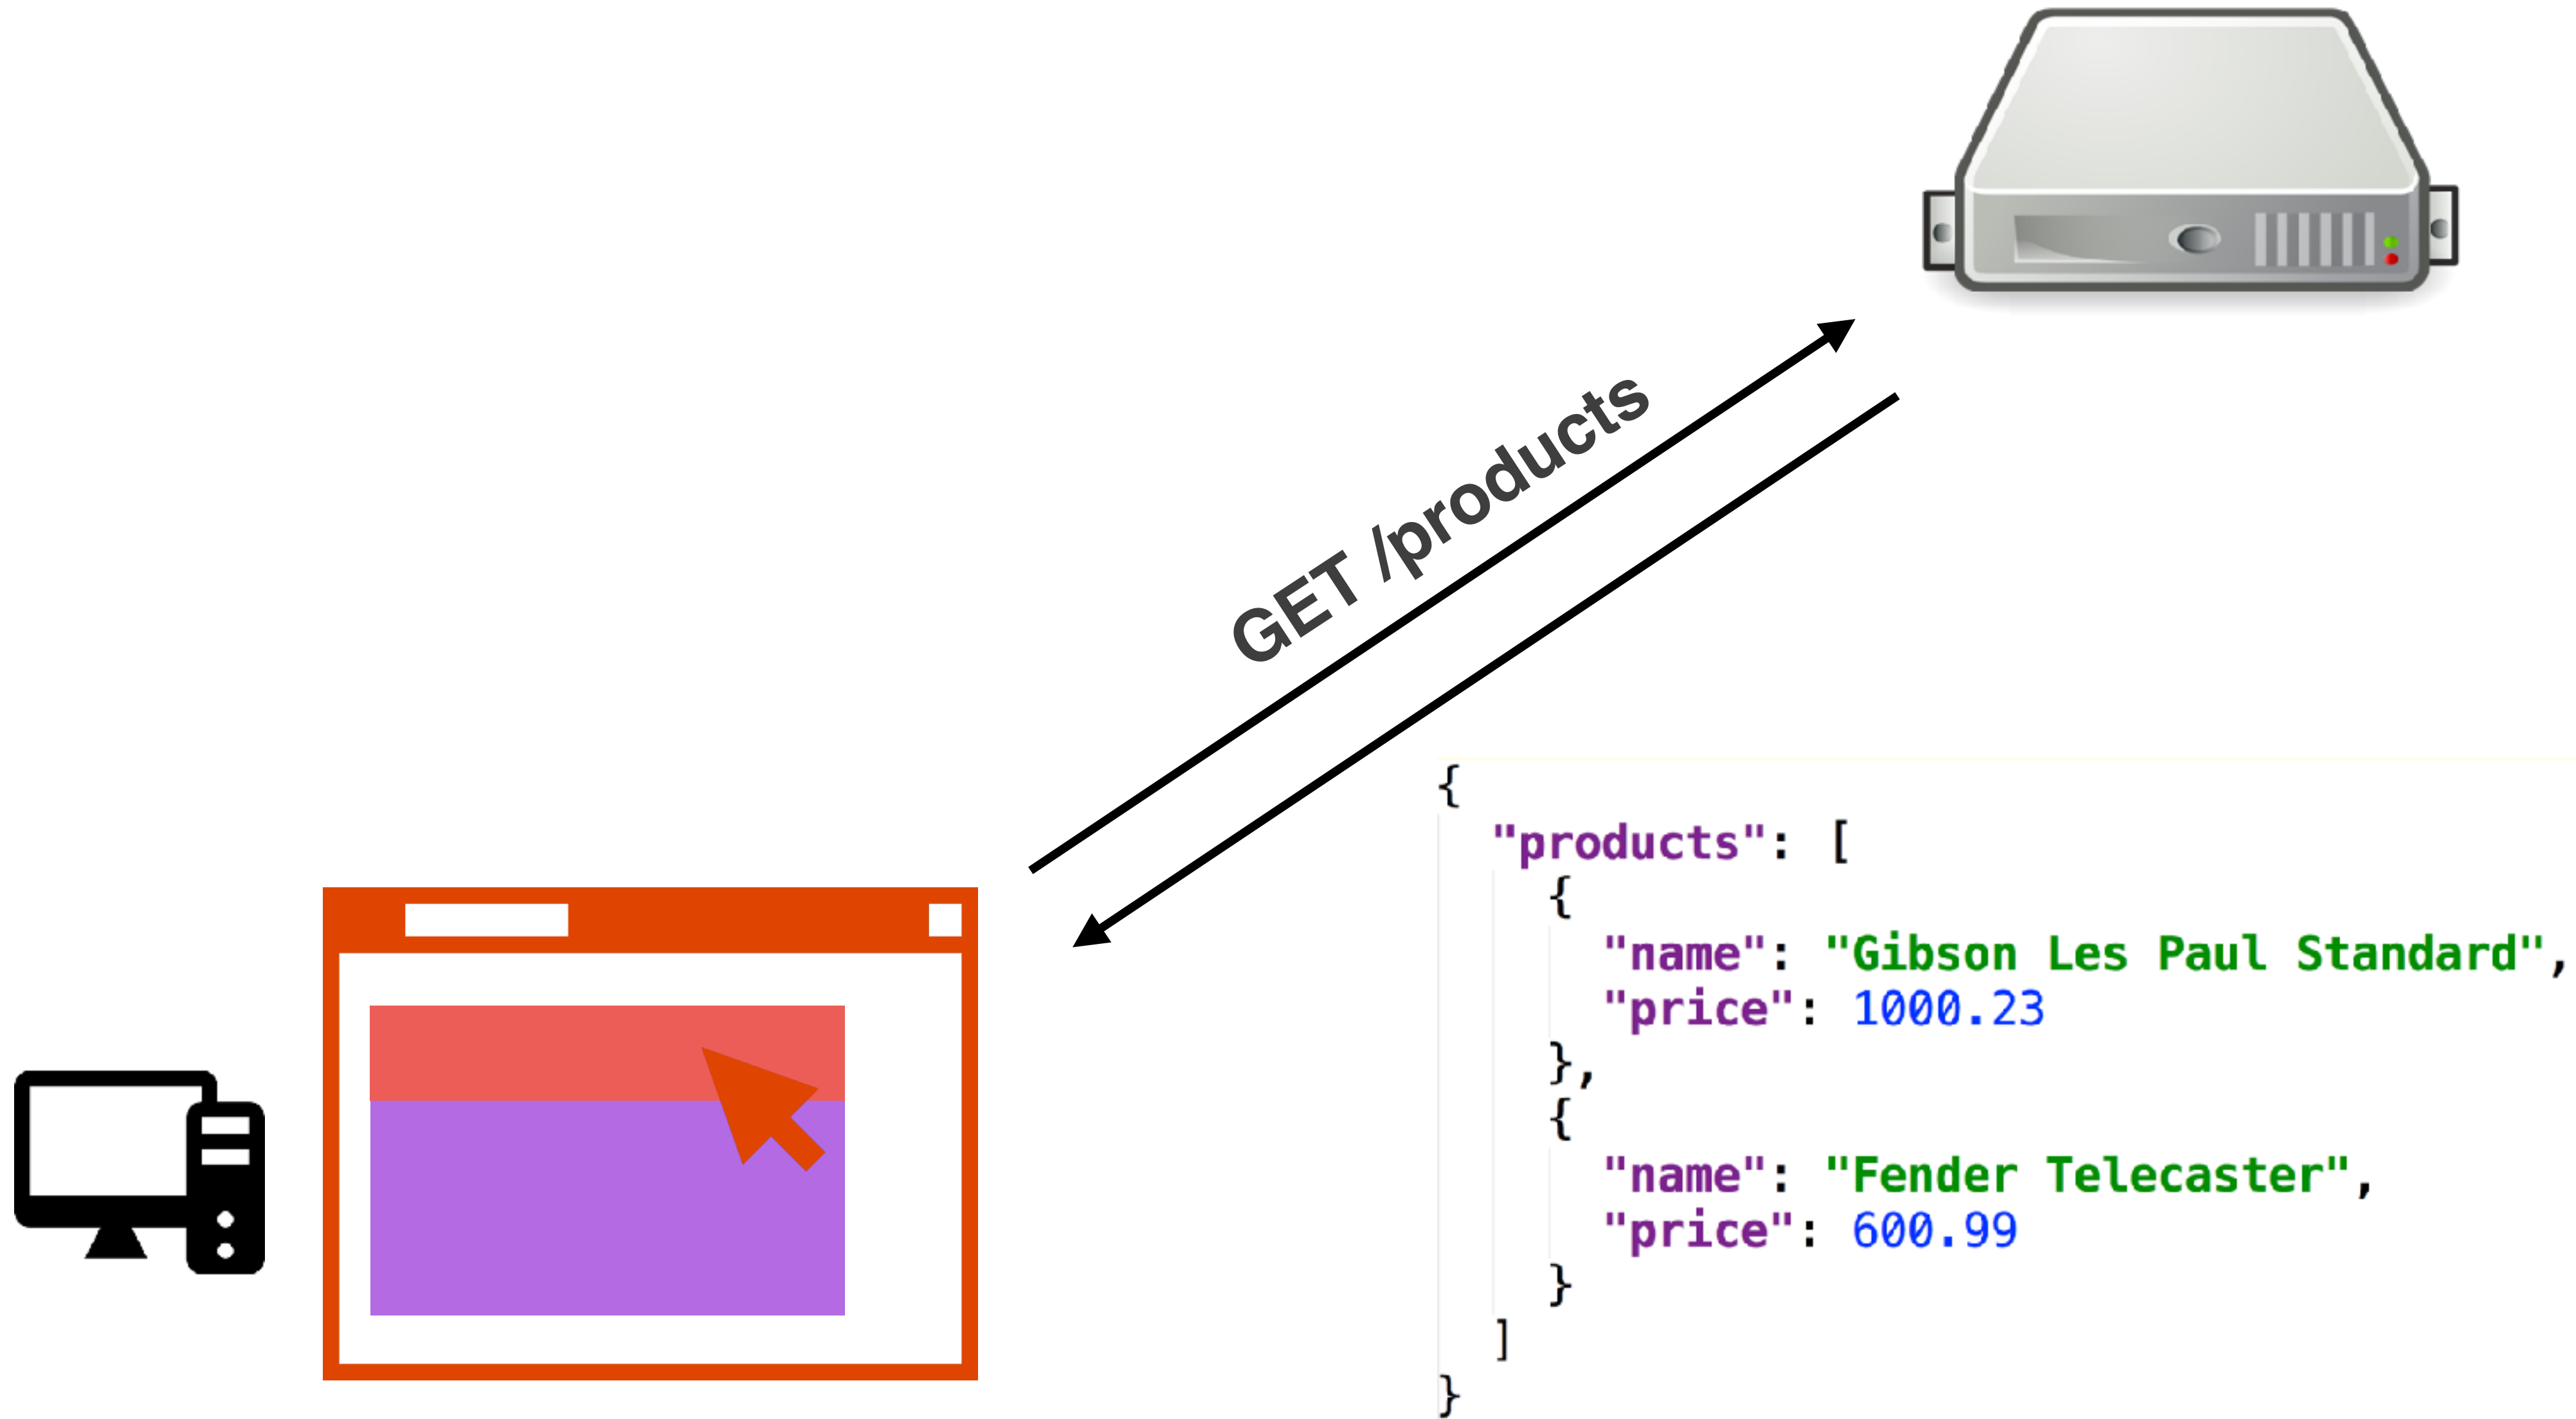

# ASYNCHRONOUS JAVASCRIPT AND XML

# DATA SERIALIZATION

# DATA SERIALIZATION FORMATS

- **How real data is transported or stored**
- **Used for delivery of data over limited transports, like HTTP.**
- **Examples: JSON, XML, YAML**

# ASYNCHRONOUS JAVASCRIPT AND XML

# ASYNCHRONOUS JAVASCRIPT AND JSON

# RECAP

- **AJAX is the method of sending background HTTP requests with JavaScript**
- **Single Page Applications load a single HTML page and dynamically update the DOM as the user interacts with the app or data gets fetched from the server (using AJAX).**
- **The Network tab in Developer Tools is your friend**

**window.fetch()**
